AAC That Opens A World of Learning

Computer Time

This Smart Activity was designed to take advantage of the highly motivating "computer time" and uses it to promote self avocation. Originally created for use by school age children, this activity can be easily modified for all ages. Users can make comments and express preferences while using CDs, word processing software, or surfing on the web. Activity page sets encourage users to make requests and comments such as "turn the volume up", "my switch is in the wrong place", and "No, I want that CD", providing them with the tools needed for successful computer use.
